before purchasing it in order to gage whether or not it would be worth my time, and all praised Sequences:  
Contemporary Chronophotography and Experimental Digital Art (ImageTime):

This volume explores a form of contemporary art that uses sequences of images to explore ideas of space, time, movement, and duration. "Chronophotographers" first explored these ideas at the end of the nineteenth century. At the beginning of the twenty-first, artists have found that sequences offer new opportunities for exploring the aesthetics at the intersection of time and space. This book contains a number of illustrated essays by international critics and theorists and discusses the work of a wide range of artists engaged in contemporary chronophotography.

About the Author Paul St. George is a London-based artist and curator and principal lecturer of computer animation at London Metropolitan University.
